

GeekyAir Frontend Task

The task is a two-page, user page containing user information and another page will have user posts.

Fetch data from JSON placeholder API [JSONPlaceholder](https://jsonplaceholder.typicode.com/).

User page:

- Card for each user.
- Each card must contain a name, username, email, address, phone, website, and company name.
- The address will be city, street.
- The website must be a link open in a new tab.
- Button link to the posts page of this user.

Post Page:

- Display the title and body of each post of a specific user.

Technologies to use:

- React JS
- Feel free to use any CSS library or pure CSS
- React router dom
- Feel free to use any method or library to fetch data

Evaluation of the Task will depend on the following:

- Cover all edges of the task
- Responsive
- Clean Code

You will deliver a GitHub repo of the task and live link “you can deploy it on Vercel or Netlify”
